

## SUMMARY

Researcher designing Machine Learning algorithms for multi-model applications in Information Retrieval and Natural Language Processing.

## EDUCATION

## UNIVERSITY OF FLORIDA

Gainesville, FL, USA

2019 - 2024 Dec(Expected)

PHD. COMPUTER SCIENCE

GPA: 3.96/4.0

2016-2018

MSC. ELECTRICAL AND COMPUTER  
ENG.

GPA: 3.5/4.0

## SICHUAN UNIVERSITY

2012-2016 | Chengdu, China

BSC. MICRO ELECTRONICS

## SKILLS

## LANGUAGES

Python: Expert

Java: Expert

SQL/SPARQL: Expert

C/C++: Intermediate

JavaScript: Intermediate

F#: Intermediate

## TOOLS

PyTorch TensorFlow

Keras Scikit-learn

Transformers NLTK

SciPy Pillow

OpenCV OpenE

Matlab NumPy

Pandas Oracle DB

REST API Flask

Docker Akka.NET

Git Linux

Google Test JUnit

## COURSEWORKS

Elements of Machine Intelligence

Deep Learning for Computer-  
Graphics

Applied Machine Learning

Trustworthy Machine Learning

Distributed Operating System

Programming Language Principles

Database Management System

Database System Implementation

Analysis of Algorithms

Advanced Data Structures

Computer Networks

## WORK EXPERIENCE

## University of Florida

## Graduate Student Researcher | Sep. 2019-present

- Developed an innovative recursive multi-hop dense sentence retrieval system with a new approach for dense sentence representation learning, which underpinned the creation of an open-domain fact verification system that attained the top ranking on the FEVER leaderboard. [Link]
- Led the creation of a benchmark dataset for a novel open-domain question-answering task, featuring multi-answer options and controversial stance mining. Crafted a user-friendly annotation tool, along with a baseline system for the new task. This system played a crucial role in assessing the impact of various components, such as information retrieval, machine reading comprehension, distinct answer selection, and stance detection, leading to a significant enhancement in the project's overall performance. [Link]
- Individual contributor and team lead in the DARPA-sponsored project "Active Interpretation of Disparate Alternatives(AIDA)", an alternative hypotheses search engine over event-centric knowledge graphs. Our system achieved top performance at the NIST TAC SM-KBP2020 evaluation. [Link]

## Nokia Bell Labs

## Machine Learning Intern | Jun. 2022-Aug. 2022

- Proposed and implemented a retrieval-based framework to ease ticket root cause analysis by retrieving the most relevant log lines from the attached log files (10-100M log lines/ticket) given ticket information.
  - Conducted data cleaning, processing, visualization, and analysis on massive time-series semi-structured system-level log corpus.
  - Developed a dense log retrieval system that finetunes self-pretrained tickets and log encoders through a contrastive learning framework.
  - The best model outperforms a BM25 baseline model by 16.1%.
